## ExpertView - CamCtrl

-  [deutsch](#)

### Inhaltsverzeichnis

1. [Overview CamCtrl](#)
2. [Settings](#)
  1. [Mode Channel](#)

With the tab *CamCtrl* you can set the functions of the optionally available camera controller "!CAMCtrl".

With this controller you can control the functions Zoom, REC ON/OFF and Trigger of an Sony Foto-/Video camera.

#### INFO:

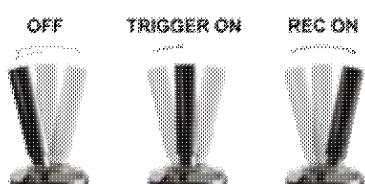

You can use this settings only if an CamCtrl *I2C* is connected.  
(More informations about the CamCtrl you can find here: [CamCtrl](#))

# Overview CamCtrl

## Settings

### Mode Channel

Here you can set the channel you will use for the function "REC ON/OFF und Trigger".

The same channel you set here should be also set on your transmitter on a 3way switch.  
The positions of the switch are:

- ***switch position OFF***

- ◆ function OFF

- ***switch position MITTE***

◆ function Trigger (The camera is triggering 1x)

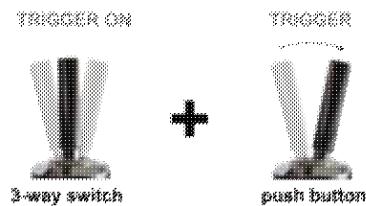

- ***switch position VOLL***

◆ function REC ON

Info:

If your transmitter also include a push button and if you use a second channel for this, you can also trigger the camera with the push button.

Important: This second channel must be set under [Out 1 Timing !!](#)

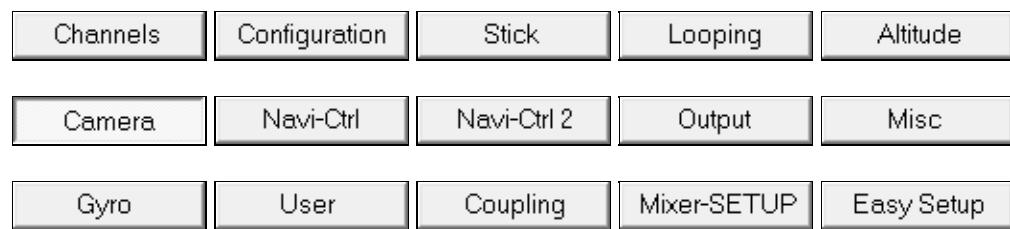

- Function:

If the 3way switch is centered (camera is triggering once) you can trigger the camera again and again via the push button.
