1 Preface

Each [MikroKopter](#), doesn't matter if Quadro, Hexa or Okto has got rigger which are just right in size.

Right rigger can either be purchased individually or in a frameset via the Online Shop: [Shoplink](#)

Who wants to make his own rigger can use this one 10x10mm square aluminum profile from the hardware store.

The required dimensions are listed here for various models.

TIP

All rigger require holes for the attachment to the center plate on one side and holes for mounting the motors on the other side.

Thats the same for all rigger. Just only the lenght of the rigger is depending on the Kopter model various.

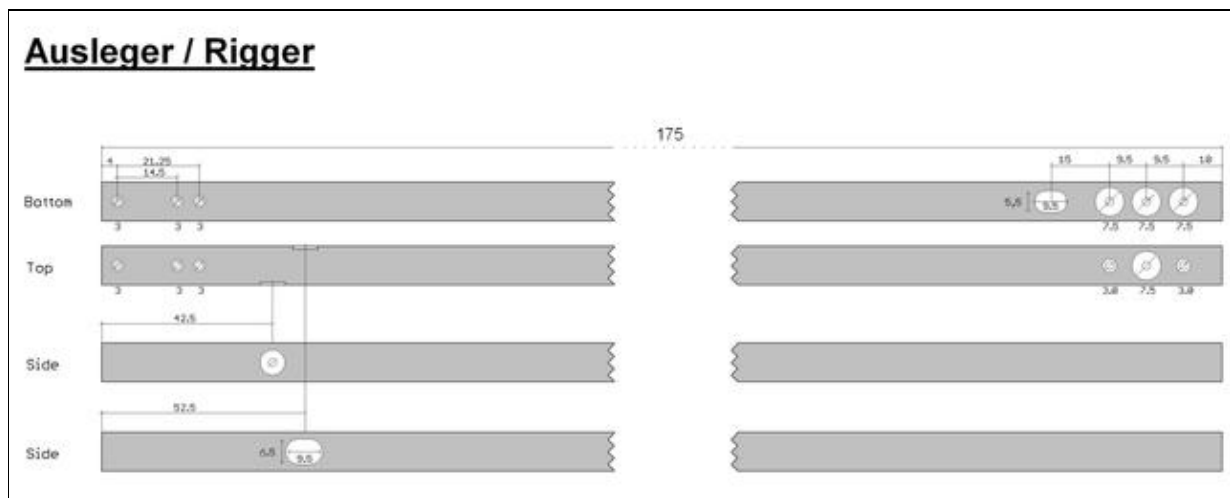

For a better cable routing the rigger can also be provided with side holes.

Most of the rigger out of our Online Shop have already those side holes.
